totemellipso maxi

free standing monolith sign
 - assembly instructions
 (with multiple front panels and
 separators, and either one or
 multiple rear panels)

1. Attach free standing base to lower end of ellipso extrusions with 6 off No 8 x 25.4 countersunk head self tapping screws into the location holes in the bottom of the ellipso extrusions (ensuring grooved face on the bottom cover plate is upwards to accept face panels).
2. Attach the top cover plate with 6 off No 8 x 25.4 countersunk head screws provided into location holes in the top end of the ellipso extrusions.
3. Attach bottom pair of braces to ellipso extrusions and free standing base and lightly clamp.
4. Attach top pair of braces to ellipso extrusions and lightly clamp.
5. Attach intermediate pair or pairs of braces at approx 1 metre intervals throughout height of sign. Locate Forex formers ensuring they are centralised on top of intermediate braces; drill through former into braces and fix with self tapping screws supplied. These formers ensure the panel curvature is maintained throughout the height of the sign.
6. After ensuring the sign assembly is set square and the ellipso profiles are parallel, tighten all bracing clamps.
7. Remove the top cover.
8. Insert rear panel (either by inserting into the location slot in one side of the ellipso vertical extrusion, hand curving the panel and slotting into the other vertical extrusion or by sliding into position from the top). Ensure the panel is located in the bottom grooved cover plate and located correctly in the ellipso extrusion. If multiple panels are to be fitted, insert the "H" section separator maintaining curvature of panel and continue fitting subsequent panels and separators throughout the height of the sign.
9. Insert the bottom front panel in a similar manner and repeat throughout the height of the sign.
10. Re-attach the top cover plate, ensuring the panels are correctly located in the grooves.
