### COMMUNICATION BOARDS

- Patient Communication Boards
- Prevention Reminder Boards
- Time-Out Boards
- Brand/Marketing Boards
- Holder Accessories

Communication is critical to the operation of health care systems. JCAHO data shows that the underlying cause of 65% of sentinel events is a breakdown in communication.\* The ID Signsystems Communication Board Systems were created with this problem in mind. They provide a tool for transparent communication among patients, caregivers, and loved ones. Based on data from trials with these boards, they can provide better understanding of care, provide a central location and organized means to communicate information about procedures, and clarify results of various efforts.

\*Joint Commission. Sentinel event statistics – June 30, 2007. Accessed at <http://www.jointcommission.org/SentinelEvents/Statistics>

**DATA IS CLEAR AND EASY TO SEE, IMAGERY CAN BE INCLUDED TO CALM AND SOOTHE**

## PROVIDING BETTER UNDERSTANDING OF CARE

Promote clearer communication and watch patient satisfaction rise. The information fielded on our patented communication board system can be tailored to specific units or patient demographics. Data such as room numbers, phone numbers, dates can be added at no extra charge. Stay over and language templates are easily and effortlessly changed out with our patented system. Add pain charts, staff names and daily plans at no extra charge.

ID Signsystems develops evidence-based visual solutions that enhance the health care experience and express conscious attention to quality of care.

## FEATURES

Each of these communication systems is totally customizable including size, wording, images and logos. In addition, id Signsystems provides a template library of elements. We work with your staff and administrators to determine your needs and preferences to produce a template that meets the unique needs of your facility.

Each patented system is created in three parts: an easy-to-clean, dry-erase surface, a custom insert underneath, and an anodized aluminum, sturdy frame that snaps open on all four sides to make every board changeable and effortless to install.
